Sprint Review 5

Sprint Goal: The defined goal of the sprint, summarizing the main objectives in terms of product/release functionalities.

R.: In this sprint, our main goal is the functioning of the event section. Concerning the GUI, we want to implement the add event feature and we want to be able to see each user's events in a day chosen by the user. Additionally, we would like to be able to change the events information and delete the events. It is a goal of ours to be able to do this in a daily format, weekly format and monthly format.

Sprint Planning: a list of estimated User Stories that are planned to be completed by the end of the Sprint.

R.: The goal for this sprint is to be able to finish the feature where the user is able to see their personal information by going to the "My Account" tab. We are planning on being able to create events and see the events in the format of days, weeks and months. We also think it would be important for the member/user of the app to be able to change the parameters of the events and to delete the events:

5	Member	see my personal informations	the user experience is personalized	Should	#5	In Progress
6	Member	create events	he can organize his schedule	Must	#5	Not Started
7	Member	see the events in the format of months	the user can see what is going to do in the month	Could	#5	Not Started
8	Member	see the events in the format of weeks	the user can overview his week	Could	#5	Not Started
9	Member	see the events in the format of days	the user can see what he is doing in that day	Must	#5	In Progress
11	Member	change parameters of events	the user can manage his events	Must	#5	Not Started
12	Member	delete events	the user can manage his events	Must	#5	Not Started

Done User Stories: a list of the actual User Stories that were completed during that Sprint.

R.: Unfortunately, we were not able to complete all users stories until the end of this Sprint, namely because it took us a while to be able to come up with a way to be able to show the user's daily events. Even though we had this problem, we were able to implement the daily event view, the add event feature and the user's personal information view, which were our main goals for this sprint:

5	Member	see my personal informations	the user experience is personalized	Should	#5	Completed
6	Member	create events	he can organize his schedule	Must	#5	Completed
7	Member	see the events in the format of months	the user can see what is going to do in the month	Could	#5	Not Started
8	Member	see the events in the format of weeks	the user can overview his week	Could	#5	Not Started
9	Member	see the events in the format of days	the user can see what he is doing in that day	Must	#5	Completed
11	Member	change parameters of events	the user can manage his events	Must	#5	Completed
12	Member	delete events	the user can manage his events	Must	#5	Completed

Sprint Retrospective: "Did well", "Do differently", "Puzzles".

R.: Did well: We were able to find a way of changing the scene of the daily format easily by different dates. We were also able to present the events in such a way that it was concise and easy to understand and also to work with.

Do differently: Next time, we need to be able to set our goals more responsibly in the beginning so that we organize our tasks and finish all that we have planned.

Puzzles: Similarly to the last sprint, we have yet to find a way to dynamically alter the event's duration so that we don't have the need to put the start time and end time in the table. This meaning, it would be nice if the box where the event is displayed appeared in different lengths according to the duration of it, like in a normal calendar app such as google calendar and so.

Sprint Review: A team and product owner' perspective of the product increment of the current sprint.

R.: This final sprint was very important to us, since we were finally able to use our GUI to its full potential, and that enabled us to develop many more features and to acquire a vast knowledge about User Interfaces. Although we were not capable of finishing all of our initial goals for this project, we believe that this project brought us many new concepts, and we developed a new taste for programming that will be of great impact in our lives as engineers.
